

only tiktok and instagram shows a list of available services the rest dont show any service. Same for the cable TV only DSTV works. Fix.

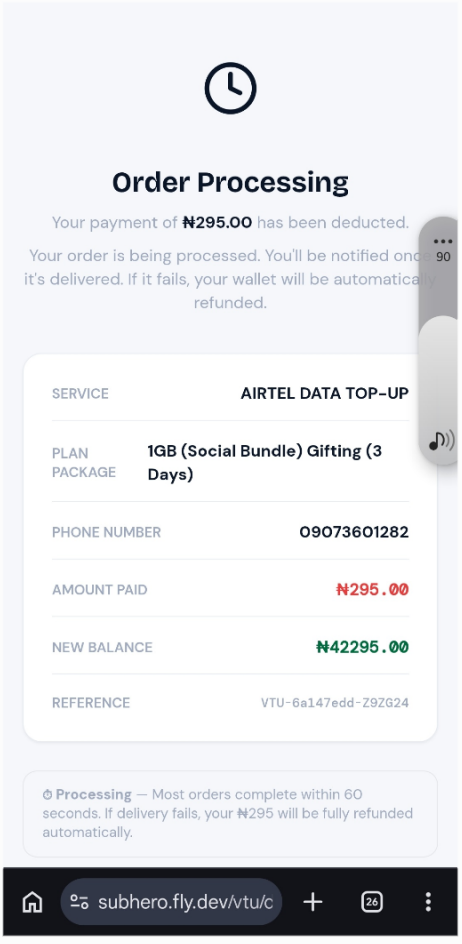

power and airtime options in the vtu products return this why?

replace this 2 with betting and gift cards and put coming soon below it.

Vtu in the bottom nav bar shouldnt point to only data option, fix this using a clean frontend ui architecture while not compromising the front end rules we initially established

This is progress but for vtu and smm services it should show the processing flow right there as the api is running and return either fail (with the correct error message) or successful not "order processing" and keeping the customer waiting without a response.
